ADD A DOMAIN FORWARDING RULE

ADD OR EDIT A RULE TO FORWARD EXISTING SUBDOMAINS TO A DIFFERENT SITE.

FORWARD FROM

@   .KARVENHOME.COM

TO FORWARD YOUR ROOT DOMAIN, ENTER @ AS THE SUBDOMAIN. THIS WILL DELETE ANY SQUARESPACE DEFAULT RECORDS IF YOU HAVE THEM.

ADD SUBDOMAIN

FORWARD TO

https://www.demfirat.com/   🗑

∨   Advanced settings

Redirect Type

Choose what type of redirect you want to create. Learn more about redirect types and how to use them.

○   Temporary Redirect (302)

        Use when the original URL still exists, and will come back online in the future.

●   Permanent Redirect (301)

        Use when the original URL no longer exists.

Forwarding Over SSL

Choose whether or not you want to forward URLs over a secure HTTPS connection. Learn more about SSL protection.

●   SSL On

        Your forward will work for both HTTP and HTTPS requests (may take up to 72 hours)

○   SSL Off

        Your forward will only work for plain HTTP requests

Path Forwarding

Choose whether you want to remove or maintain the URL paths from your original domain. Removing them means all URLs will forward to a single new address.

●   Remove paths

karvenhome.com/about.html   →   https://www.demfirat.com/

◯   Maintain paths

karvenhome.com/about.html   →   https://www.demfirat.com//about.html
